

Opening files directly out of the Acrobat Reader

Every digital wood joint can be opened directly out of the Acrobat Reader from the overview pages, on which they are listed in all data formats provided on this CD-ROM. Condition is, that you have installed the application needed to open the chosen file on your computer. While the native CAD-data formats can only be opened in the corresponding CAD-programs, the dxf-files and IGES-files can be opened in several different CAD/CAM-programs. As the data exchange formats dxf and IGES can not be allocated to a specific application, you need to select one of the applications installed on your computer in the upcoming dialog box in order to open the file.

All files of digital wood joints, which are provided on this CD-ROM, have been carefully tested in the corresponding applications.

In order to open a file, please make sure the software version of the corresponding application installed on your computer is the same to or newer than the one of the file. It is normally not possible to open a file if the software version of the program is older than the one of the file.

Name of the joint:	Name of file:	in folder:
Tenon Joint with Star-Shaped Mortise	Z_003	→ DXF.10 – 2D → DXF.12 – 3D
Shouldered Tenon	Z_002	→ DXF.10 – 2D → DXF.12 – 3D
Locked Leg Framing	KN_001	→ DXF.10 – 2D → DXF.12 – 3D
