Printing

The graphical adaptation of the overview and text pages of the CD-ROM "Digital Wood Joints" was optimized for screen visualization. Unfortunately, this lessens in some cases the printing quality. Line graphics sometimes appear "muddy". Texts placed on colored backgrounds do not appear when printing on a simple laser printer. These problems are known and were accepted in view of an optimal screen visualization.

When printing, you also need to take into account that the page format does not correspond to the paper sizes normally loaded in your printer, as it was also optimized for the visualization on the screen. In order to adapt the page format to the paper size, you need to activate the function SHRINK TO FIT in the Printer Set Up.
