

The Data formats

...**.cad** Data format of the FBZ CAD/CAM 2D software of the → **MBA GmbH**, formerly Robert Bosch GmbH. The FBZ CAD/CAM 2D software is mainly used in vocational schools for training purposes, together with the CNC-training machine FBZ. The FBZ CAD/CAM 2D software contains all functions that are necessary to create simple geometries and to prepare their machining. The machining process can be simulated on the screen for controlling purposes.

The digital wood joints are available in the CAD-format - version 1.2 / update 98 - as 2D router contours, and include the selection of necessary tools, the dimensions of the stock part, as well as the work plan. These data can be passed on directly to the corresponding CNC-training machine FBZ 40/30 via the postprocessor, and then be machined.
