

## Japanese wood joints... digital

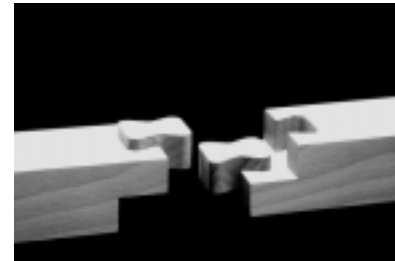

The experimental study project “Japanese wood joints ... digital” formed part of the activities carried out by the C...Lab in the winter term 1995/96. The project aimed at reviving the technical and aesthetic qualities of traditional wood joints by making use of computer-controlled manufacturing. Japanese wood joints, which epitomize skills that have been perfected over centuries, were chosen as models for the CNC-compatible wood joints which were yet to be developed.

The project “Japanese wood joints ... digital” laid the foundations for the CNC-compatible wood joints presented on the CD-ROM “Digital Wood Joints”.
