

## Help

### Webjump

Webjumps to Internet addresses have been carefully investigated and tested. However, it happens time and again that URL's change or get taken out of the Net. If a Webjump does not launch the desired Website, then please check whether you can get there directly by means of your Web Browser. Should this be possible, we must have made a programming mistake, for which we beg your pardon. We would be grateful if you pointed the mistake out to us.

Please set up the Weblink Preferences, ie. the choice of the Web Browser application, in the Preferences menu.
